PROTECTING YOUR EQUIPMENT UPTIME

Many industrial facilities rely on sensitive electronics, whether it's drives, PLCs, variable speed drives (VSDs) or something else. These systems are powerful, fast and unforgiving when power quality slips.

SineTamer® is next-generation surge protection technology, designed to address the disturbances that cause the most damaging failures before they result in downtime.

Our solutions are ideal for protecting **servo and VSDs, PLCs, power supply units (PSUs), uninterruptible power supplies (UPS), control panels and LV distribution boards** – and are compatible with products from all manufacturers.
